

EMERGENCY RESPONSE BEACON

Community Information

An ERB is a fully self-contained, solar powered unit with cellular connectivity.

In an emergency, members of the community can press the duress button to engage with the Surf Life Saving State Operations Centre (SOC) for emergency assistance 24 hours a day.

A high resolution static camera on the masthead directed seaward provides visuals for the SOC to assess ocean conditions and monitor incidents.

There is also a low resolution camera on the duress button to identify caller and determine authenticity of call.
